

Description

Secure Network Design protects your business long after the network is implemented. Our focus is on designing new or upgraded LANs and WANs that support your business goals today and anticipate tomorrow's growth. By carefully reviewing your physical site and business objectives, we design a network that fits your business and incorporates the latest technology. The deliverable you receive is a design capable of supporting your business momentum plus complete technical details to move easily through implementation.

Because long-term management of the network is crucial, we design in the capability and management tools and processes you will need today and in the future. We examine everything that has a bearing on network performance, and we develop a comprehensive set of recommendations, including:

- Components – hardware and software
- Carrier services, such as ISPs
- Naming and addressing conventions
- Connectivity devices, such as switches and routers
- Security issues – firewalls, password protection, and other measures

In selecting from the multitude of platform, product and technology choices, we give extra weight to current and emerging industry standards. Our goal is to ensure that your network is as compatible, cost-effective, and adaptable as possible.

Features and Benefits

nGran™ Secure Network Designs provide:

- Performance controlled by detailed statement of work
- Design based on site survey and business objectives
- Comprehensive recommendations, including all hardware and software components, carrier services, connectivity, and security
- Complete network diagrams

Service Provider of Choice

nGran™ supports current and emerging standards for client / server technologies. We employ qualified experts with extensive backgrounds in building and managing client / server systems and networking environments. We use industry best practices and state-of-the-art tools to find and correct the most intractable data networking problems.

Other Services Available

nGran™ offers a complete suite of network and security services. Related network services include *Audits, Site Surveys, Secure Network Design, Enterprise Network Planning, Network Test & Validation, Integrity Reviews, System & Network Tuning*, and other consulting services, as required.
