

Security Awareness Training

Description

nGran in conjunction with the National Security Institute, offer onsite Security Awareness Training programs to show clients and their employees the latest sets of threats effecting Internet usage both from work and home perspectives. The service is offered by nGran instructors as a customized set of courses with tracks for General & Administrative (G&A) users, Technical Support as well as Developers. Courses typically run from 90 – 180 minutes in length. nGran will use your company’s Security Policies & Procedures along with your unique set of needs to properly tailor the course materials to your requirements. Demonstrations of “high risk” threats are included for all tracks with useful explanations at the appropriate skill level. In addition, all tracks provide “Best Practice” guidelines based on NIST SP 800-50, CERT & Department of Homeland Defense recommendations. Supplementary course materials include security questionnaires, glossaries, protection tools and approved processes to securely “surf” in today’s Internet environment. All courses meet the training guidelines for:

- Graham-Leach-Bliley Act Employee Training Requirements
- U.S. Federal Guidelines Under the 1987 Computer Security Act for Security Awareness and Literacy Training
- U.S. HIPPA Personnel Training Requirements

Features and Benefits

Employees must complete a test at the end of each session. Those that take the course will receive handouts and Certificates of Completion upon submission of successful test results. Core materials are focused on the following categories:

- Standards Based Security
- SANs Top 20 Vulnerabilities
- Phishing
- Attack Magnitude & Malware Examples
- Policies & Procedures
- WiFi Usage Guidelines
- Home Use Guidelines & Recommended Tools

Technical Support and Developer courses run longer than those for G&A employees. They typically add other topics such as “Dealing with Attacks”, Countermeasures and “Safe Programming Practices”.

Other Services Available

nGran™ offers a complete suite of network and security services. Related security services include **Web Site Reviews, Remote Security Monitoring, System Security Audits, Controlled Penetration Testing, Vulnerability Assessments, Site Recovery Planning**, and other consulting services, as required.
