

TAS - Watch

Real-Time Intrusion Prevention from Trojans, Adware & Spyware

What is *TAS - Watch*?

TAS - Watch is a PC security protector that guards against the infiltration of unwanted Trojans, Adware, Spyware or Surveillance tools to your system. These types of programs are sometimes downloaded when you connect to a link or open an email attachment. Trojans, Adware and Spyware are designed to deposit programs on your PC WITHOUT your express approval. These types of programs collect your login, passwords and other sensitive information about you and the programs that you run. They run in the background and then send the information off to other sites for exploitation.

When **TAS - Watch** is running it can automatically stop any software installs, block the execution of Malware and preserve the privacy of your PC and more importantly your user credentials and personal information. **TAS - Watch** is “Self-Defending” and cannot be stopped by Malware or malicious users.

Whether you are managing a large complex network, multiple systems on a LAN/WAN or SOHO environment, **nGran™** products provide you with unparalleled solutions to protect the integrity of your information and systems.

Key Product Highlights

- Detects anomalous usage of OS and applications
- Discriminates between usage errors and unauthorized access
- Recognizes Keyboard Loggers, Remote Access Trojans, Surveillance Tools, Rootkits, Trojans, Adware and Spyware
- Terminates ALL Rogue Programs
- Automated event notification on-screen and/or by optional email and pager
- Easy maintenance of data files
- Runs in background
- Does not impact System Performance, CPU usage < 5%
- Multi-platform support for Microsoft® Windows Operating Systems
- Rejects unauthorized program termination attempts
- Self-Defending Security Software

Quick installation and Easy to Use

- Quick Installation on Microsoft® Windows with WinZip®
- Menu-driven system with logical GUI
- Context sensitive help function provides description, examples and notes for quick reference and ease of use

TAS Technology

TAS technology makes up the program analysis, event management, and proprietary pattern-matching functions.

Technology features include:

- Support for Microsoft® Windows 2K, XP & Windows 2003
- Notification management with fail-close feature
- Expert system automatically generates new behavioral rules from local applications
- Coverage for over 120K Malware programs
- Built-in security defense management
- Rejects unauthorized program installations
- Blocks USB ports, CD and Floppy drives
- Comprehensive local and remote “audit trail”
- Sophisticated Intrusion Prevention Solution

Advanced Program Tracking

nGran’s advanced program tracking system runs on multiple Microsoft® Windows platforms and uses sophisticated methods to identify and neutralize potential security and privacy problems without impacting system performance.

- Tracks and displays source and type of event
- Threat analysis distinguishes between Adware, Spyware and Trojans
- All Intrusions are logged in a simple to use data file

Platform Requirements

TAS - Watch will operate on Windows® 2K , XP & 2003 platforms with as little as a 750 MHz CPU speed and more than 512 MB of RAM. It requires less than 25 MBytes of free disk space to operate.
