

Website Redirection Notification

Description

A subscription service is offered to detect and report on Company Website Redirections that reveal any unauthorized use of a commercial site leading to increased liabilities and reputational loss of company websites. This specifically includes tracing services that identify the IPGeolocation of interlopers exploiting open relay or other improperly configured Internet sites that do NOT conform to a given company's Internet Use Policy.

The methods to deliver this service include multiple daily passes via online web searches, that match violations of Internet Use Policies with identified fraudulent and malicious website traffic. In addition to early detections of misuse, qualifiers (filters) are programmatically added to tailor the searches to those of a company interest.

Features and Benefits

Immediate notification to designated contacts with sufficient details to engage "Intrusion Prevention" mechanisms are the primary goal of this service. Daily reports of suspicious activity is also offered as an adjunct to existing internal services that provides summary and detailed information typically displayed in the following categories, others may be added or substituted based on search results;

1. Existence of redirected web site data by logical IPGeolocation clusters
2. Links that by-pass protected web pages without login/authentication mechanisms
3. Descriptions of tools being used to manage or monitor systems
4. eMail addresses that can be used to further find details about employees and contractors or commit spoofing or masquerading attacks against company websites
5. Descriptions of techniques used to compromise the security and integrity of company websites
