

Description

The most critical component in any good security program is the establishment of policies and procedures for the use of systems and network resources. Such guidelines are frequently under construction due to changes in business operations, rules, technology, or other variables in the environment. Unfortunately, the specialist resources required to validate those changes against the policies are seldom available. nGran™ offers a vulnerability assessment service to help companies and government agencies evaluate the compliance of security controls to existing corporate or government security guidelines at any point in time.

nGran™ conducts a site Vulnerability Assessment to evaluate the strength of current security defenses from internal and external perspectives. The tests are conducted manually and with a series of non-destructive probes. They focus on system access and configuration controls, password files, Windows® Registry, and NetWare® bindery information.

As part of a security vulnerability assessment, nGran™ also conducts a thorough review of access control administration for systems and networks. This review is designed to uncover problems associated with default configurations of system and network software. It also focuses on change management controls that are utilized in the daily operation of systems and networks. This review analyzes system, event, and security logs, and associated operations procedures used in systems and network management.

Features and Benefits

The deliverable that you receive is a Security Vulnerability Assessment document. This quantifies the systems and network environments from an operational perspective and provides recommendations to proceed to implementation of sound security procedures that emerge from the analysis.

Service Provider of Choice

nGran™ supports current and emerging standards for security authentication technologies. We employ security experts with extensive backgrounds in building and managing secure systems and networking environments. We use industry best practices and state-of-the-art tools to find and correct the most intractable data security problems.

Other Services Available

nGran™ offers a complete suite of network and security services. Related security services include **Web Site Reviews**, **Remote Security Monitoring**, **System Security Audits**, **Controlled Penetration Testing**, **Site Recovery**, **Security System Implementation**, and other consulting services, as required.
